Skills

Languages: Python, JavaScript, C/C++

Backend: Django, Django REST Framework, Microservices

Frontend: Angular

Databases & Search: PostgreSQL, MySQL, Redis, Elasticsearch, Solr

Tools: Docker, Git

Experience

Software Engineer III, Contify

May 2022 – Present

- Designed and implemented an AI-powered insights module using rule-based and prompt-driven pipelines, reducing irrelevant news signals by 60% and decreasing manual curation effort by 70%.
- Built a reusable Angular shared module library, improving code consistency and reducing duplication across multiple frontend applications.
- Designed and optimized Elasticsearch-based search, enabling real-time full-text search and improving query accuracy and latency.
- Architected and developed scalable microservices using Django REST Framework, Redis, and Docker, improving system reliability and maintainability.

Software Engineer, GeeksforGeeks

Aug 2021 – Apr 2022

- Redesigned and normalized database schemas and refactored backend APIs, improving query performance by 40% and increasing throughput.
- Developed a role-based admin dashboard using Django, reducing manual effort for content and job management by 70%.
- Built and maintained scalable backend services in Python, ensuring high availability of platform features.

Software Engineer, RenewBuy

Nov 2019 – Aug 2021

- Implemented asynchronous processing using Celery, improving system scalability and reducing response times.
- Developed end-to-end RESTful APIs powering online insurance purchase flows.
- Built internal tools and leveraged Redis caching to improve performance and reduce latency.
- Led resolution of critical production issues through root cause analysis, ensuring high system uptime.

Projects

- **Data Formatter:** Developed a JSON, XML, and HTML formatter and deployed it on AWS.

Education

Master of Computer Application

CGPA: 7.9/10

Bharati Vidyapeeth's Institute of Computer Applications and Management, Delhi
